## ABOUT

Results-oriented Full-Stack Software Developer with 7 years of experience building scalable web applications, SaaS platforms, and custom business solutions. Skilled in PHP, Laravel, JavaScript, React, Vue, system architecture, API integrations, and database design. Experienced in delivering 100+ projects across freelance and corporate environments, with a strong focus on performance, automation, user experience, and turning complex business requirements into reliable software solutions.

## WORK EXPERIENCE

### Software Specialist · Alpiş Holding · Full-time

Mar 2025 – May 2026

Worked as a Software Specialist at Alpiş Holding, contributing to the development and maintenance of internal software solutions. Took part in backend development, business process digitalization, database management, system integrations, and the improvement of existing applications.

### Engineering Software Consultant Intern · Cadem

Aug 2024 – Sep 2024

#### Digital · Internship

Completed a software development internship at Cadem Digital, gaining hands-on experience in professional software development processes and contributing to web-based projects.

### Founder · Ticsoft · Self-employed

Jul 2024 – Feb 2025

Founded Ticsoft to provide software development and digital solutions. Managed the full lifecycle of client projects, including requirements analysis, software architecture, development, deployment, technical support, and client communication.

### Senior Backend Engineer · Dentapros · Full-time

Jul 2022 – Sep 2022

Worked as a Senior Backend Engineer, focusing on backend systems, server-side application development, database operations, API development, and the implementation of reliable web application infrastructure.

### Web Development Specialist · Freelance · Freelance

Apr 2018 – Present

Working independently as a freelance web developer, delivering software solutions for clients across different industries. Managed projects from requirements analysis and planning through development, deployment, and ongoing support. Built custom websites, management panels, backend systems, APIs, integrations, and database-driven applications while communicating directly with clients and adapting solutions to their business requirements.
